TECHNICAL SKILLS

Languages: Python, C++, Java, JavaScript, TypeScript, Go, C, C#

Frameworks: React, React Native, Spring Boot, Django, GraphQL, PyTorch, TensorFlow

Other: Linux, Claude Code, Cursor, Glean, Git, Docker, Kubernetes, AWS, MongoDB, WebRTC

EDUCATION

Concordia University

Bachelor of Engineering, Software Engineering (Co-op) | GPA: 3.7

Montreal, QC

Aug. 2021 – May 2025

Vanier College

Diploma in Computer Science and Mathematics (Honor Roll)

Montreal, QC

Aug. 2019 – May 2021

EXPERIENCE

Coinbase

Sep. 2025 – May 2026

Software Engineer

Remote (Canada)

- Shipped high-impact features for **Coinbase Web** and **Coinbase Mobile app** as part of the Home & App team, working on **Home** and **Search**, two of the platform's highest-traffic surfaces.
- Owned end-to-end **experiments** for Coinbase consumer surfaces, designing, implementing, analyzing, and resolving **A/B** tests that increased **DEX trades by 10%** and contributed to **2% growth** in overall consumer revenue.
- Implemented Snowflake-based analytics instrumentation for revenue and CTR metrics, enabling reliable experiment evaluation and data-driven product decisions.
- Led a performance initiative improving **Core Web Vitals**, reducing Home **page's navigation blocking time (NTBT) by 24%**, directly enhancing perceived load speed for millions of weekly active users.
- Supported production systems through on-call rotations using **Datadog** and **Sentry**, investigating regressions and monitoring key service metrics such as HTTP requests, latency and error rates.
- Streamlined development workflows using **Claude Code**, **Cursor**, and **Agent Multiviewer** for code exploration, debugging, and implementation; automated our team's weekly on-call report document with a **n8n workflow**.

Innovmetric

Sept. 2024 – Dec. 2024

Backend Developer Intern

Quebec City, QC

- Profiled and optimized **C++ performance tests**, identifying **algorithmic** bottlenecks and reducing execution time by **95%** through improved test execution and data processing.
- Contributed within a **large codebase** in C++, navigating and modifying multiple interconnected modules in a 3D inspection platform.
- Improved end user experience by implementing drop-down menus and status indicators for geometrical standard selection, and delivered a **well-received technical demo** to stakeholders
- Designed and implemented a command module for editing and managing inspection configurations, with robust unit and integration testing using the **BOOST** testing framework

Flexspring

May 2024 – Aug. 2024

Software Developer Intern

Quebec City, QC

- Modernized the UI by replacing **Redux** with **TanStack Query**, simplifying state management and cutting up to **30% LOC** in key components.
- Developed and implemented new frontend features with **React TS**, **React Query**, and **Metronics**
- Built backend services in a **Linux** (Ubuntu) environment using **Java Spring Boot**, leveraging cloud technologies such as **AWS Cognito** for authentication, and managing data with **Redis**, **Aurora**, and **PostgreSQL**.
- Utilized **Docker**, **Jenkins**, **Sentry**, and **SonarQube** in a formal CD/CI process for reliable software delivery

Ross Video

Aug. 2022 – Dec. 2022

Software Developer Intern

Ottawa, ON

- Minimized latency by over **70%** by migrating an old WebSocket-based system to a **WebRTC**-based real-time, peer-to-peer service, eliminating server relays for direct client messaging; NodeJS used as a lightweight signaling server.
- Presented monthly updates to **stakeholders**, incorporating feedback to build trust and ensure project alignment.
- Designed and developed UI features using **React** and **Redux** for state management.
- Maintained backend services with **Java Struts II**, implementing AJAX Events for server-view synchronization.
